

	Directive	
	Quality policy	

Based on the company's guiding principles, the management of Meleghy International formulates the following principles as a quality policy:

Declaration of Commitment

In accordance with the declaration of commitment, a quality management system in accordance with IATF 16949 has been established at the Meleghy International sites. The company undertakes to maintain this system.

Importance

The management is aware that quality as a result of our actions is decisive for customer satisfaction. We are committed to the highest standards and continuous improvement. All economic goals are defined in compliance with the relevant quality requirements.

Employees

Responsibility for quality in the company is assumed by all employees and managers of the company. Appropriate training measures and continuous quality management audits promote employee awareness and sensitivity to this issue at all levels of the company.

Continuous improvement process

Our company processes are measured and evaluated using key figures and are subject to continuous and sustainable improvement. The effectiveness of the quality management system is checked at regular intervals by means of internal audits. Any discrepancies are underpinned by optimization measures and rectified.

Communication

The quality management system is documented and communicated within the company at all levels (internal communication). The customers of Meleghy Automotive receive the desired quality information (external communication). Both employees and the public are regularly informed about innovations and changes in the quality management system.

Involvement of suppliers

Suppliers and service providers are obliged to comply with comparable quality standards. By purchasing products of the required quality level, the performance of our company is also improved.

Laws and regulations

The basis for fulfilling the requirements of the quality management system is compliance with all existing legal regulations and laws, customer-specific requirements and specifications from the IATF 16949 standard.
